

Iseära Apartments

Few neighbors

The apartment buildings are only three storeys high, and each building has just one stairwell.

Outdoor parking spaces.

The barrier recognizes your car by its license plate number and opens automatically. You can also call it at any time.

Electric vehicle charging

You have the option to order a charging point for your own parking space.

Bicycle parking

There is a bicycle shelter in the courtyard where residents can safely store their favourite means of transport.

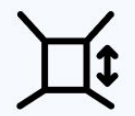

Video intercom

It allows you to see who has arrived to visit you.

Advantages of a garden in the city

A cohesive residential quarter with small apartment buildings and townhouses, surrounded by trees and shrubs, with playgrounds and recreational areas in between.

High ceilings, tall windows and high doors on the ground floor

2.8 metres, 2.4 metres, and 2.3 metres respectively.

A-rated energy efficiency

Lower electricity costs.

Heating

Water-based underfloor heating no radiators needed. Heat is provided by a ground-source heat pump and it doesn't get any greener than that. In the buildings of the first phase, ground-source heating is used; for the new phase, the heating solution is currently being finalized.

Each home has its own mechanical ventilation

It is heat-recovery based and energy-efficient. A charcoal-filter cooker hood is provided for the kitchen.

Remote-read meters for water and electricity

One less thing to worry about.

Storage rooms on the ground floor

Heated storage rooms on the ground floor so you can even pop down in your slippers to grab the Christmas decorations.

A home you can design yourself

With the Liven Home Designer program, you can choose the materials and furniture you like for your future home. An interior architect will support you every step of the way.
